

Forklift Safety Training

OSHA requires employers to ensure each operator of powered industrial trucks is competent to operate his or her truck safely. This can be demonstrated by requiring all operators to complete a forklift safety training program and evaluation.

Society Risk Control can provide your employees with the nationally recognized Coaching The® Lift Truck Operator™ 2 training program. This training will include classroom instruction, scenario analysis, a written evaluation, and a hands-on performance evaluation.

The classroom portion of the training covers:

- Regulatory requirements
- Operator responsibilities
- Pre-start safety inspections
- Picking up loads
- Moving the lift truck
- Setting down loads
- Pedestrian safety
- Site-specific safety rules
- Written exam

Each operator who completes the training will receive a certificate that is valid for three years.

Please contact us today for more information or to schedule your forklift safety training.
